

New publication on spatial-x models

3/6/2021

I'm excited to share that our article "X Marks the Spot: Discovering the Treasure of Spatial-X Models" has been published in *The Journal of Politics*.

About the Research

This work, conducted with Guy D. Whitten and Laron K. Williams, explores the spatial-X framework for analyzing spatial dependencies in political and social data.

Key Contributions

- Develops new methodological approaches for spatial modeling
- Provides practical guidance for researchers working with spatial data
- Demonstrates applications across multiple substantive areas

Access the Research

- Published Article: [The Journal of Politics](#)

- **Replication Materials:** Available on our project repository
- **Software:** R packages and code for implementing spatial-X models

This research builds on our ongoing work to make spatial analysis more accessible and useful for political scientists and other social researchers.

Related Work

This publication is part of a broader research program on spatial methods. See also our work on “[Interpretation: The Final Spatial Frontier](#)” in *Political Science Research and Methods*.

For questions about the methodology or replication, feel free to reach out!
